

Database Design

PostgreSQL. Tables are created by the SQL files in `server/db/migrations/`. Money is stored as `NUMERIC(10,2)`. Below is a short summary of each table.

Table	Main columns	Notes
roles	id, name	customer / instructor / admin
users	id, full_name, email, password_hash, role_id, account_status, referral_code, referred_by, reward_points	account_status = pending/active/rejected/suspended
membership_categories	id, name, registration_fee, monthly_fee, referral_percent, withdrawal_limit, reward_multiplier, facilities	Bronze, Silver, Gold, Platinum, VIP
registrations	id, user_id, category_id, status, reviewed_by, reviewed_at, note	approval history
subscriptions	id, user_id, category_id, start_date, expiry_date, status	one active membership period
payments	id, user_id, subscription_id, payment_type, months_paid, amount, paid_at	registration or monthly
referral_bonuses	id, referrer_id, referred_user_id, payment_id, amount	bonus for referrer
reward_transactions	id, user_id, points, reason, created_at	+/- points history
point_withdrawals	id, user_id, points, status, created_at	redeemed points
facilities	id, name, is_active	Gym, Football, Swimming, etc.
bookings	id, user_id, facility_id, booking_date	facility bookings
notifications	id, user_id, message, is_read, created_at	dashboard alerts

(`schema_migrations` also exists to track which migrations have run.)

Keys

- Every table has an `id` primary key (SERIAL).
- Foreign keys link most tables back to `users` (and to categories/facilities).
- `users.email` and `membership_categories.name` are unique.
